

Press Release: Austrian Industry-Start-Up is proving high Waves internationally

"Day of Plant Construction" at INSITE IT

Linz, Austria, 15 February 2017 - The five-year anniversary of the software company INSITE IT was totally devoted to plant construction and generated great interest internationally. Plant builders from all over the world travelled to Linz, the capital of Upper Austria, for the celebration ceremony and new office opening. An intensive two-day workshop program around the festivities showed the numerous innovations of the LMS software and how it helps to optimize construction projects.

The feedback on the opening was enormous. "Our partners came for instance from Orlando, Düsseldorf and Vienna. The fact that they are so keen to get to know our company personally and to experience the full potential of our software with workshops gives us a great pleasure", states CEO Thomas Roithmeier satisfied. "Representatives of the world's leading companies such as Thyssenkrupp, Voith, Siemens, Primetals, Sandvik and Andritz are great references for us."

With the opening of the new office at the Blumauerplatz in Linz, in a prime location right next to the architecturally highly demanding musical theater, the team around the co-founders Thomas Roithmeier, Florian Altmann and Andreas Simader fulfilled a long cherished dream. "Our old premises in Raimundstraße were just too small", the software specialists conclude. "We have grown steadily over the past five years - a new, modern office was logically the next step."

About INSITE IT

Since its founding in 2012, INSITE IT has continuously become a professional partner for plant engineers. The software company, headquartered in Linz, Austria, and located in Chicago, USA, develops software solutions for material tracking and construction site management for large construction sites.

The goal is to have all relevant information available at any time and simply at the push of a button, in order to minimize search and standing times, document deviations and increase the quality in the processing of a large project. The [Insite LMS Software](#) and its mobile app for scanning barcodes, RFID tags, GPS positioning and image documentation dramatically reduces working hours and allows consistent traceability until the last supplied screw. With tablets and state-of-the-art technologies such as GPS tracking, an optional cloud-solution and a location-independent synchronization, companies keep an overview of large-scale projects around the world. Thanks to INSITE IT incomplete documentation is a thing of the past. The software company already has many satisfied customers. And they are getting more and more.
